

Alynix Tour Report– 4/28/2022

Thank you to Alynix for hosting our joint event and presentation with SMRP Kansas City titled *The Use of Robotics and Drones to Perform Maintenance Activities*. We started the evening with a presentation by Ben Linder, President at Alynix, and Aaron Smith, Chief Data Scientist at Alynix. The presentation focused on using sensors to make tasks easier and better predict issues or performance changes. Following a light dinner and a presentation about SME Chapter 57 and SMRP Kansas City, Ben Linder hosted a tour of the Alynix facilities. The tour provided a great opportunity to see the various drones and sensors that Alynix utilizes. We also saw their 3D printers that are used to prototype parts.

Thank you to Alynix for a great event!

The next SME Chapter 57 event is at Bayer Crop Sciences on June 30th at 2:30 PM. A registration link is to follow.

This event was hosted jointly by SME Chapter 57 and SMRP (Society of Maintenance and Reliability Professionals) Kansas City. If you are interested in learning more about SMRP Kansas City, please visit their website <https://exchange.smrp.org/kansascitychapter/home>.
